*350 kW ultra-fast charger required for quickest charge times - chargers are currently available on selected arterial routes – see Charge myHyundai map for details. Not currently available in Northern Ireland. Hyundai test data for comparison purposes. Actual time may vary from stated times/ranges and is dependent on several factors including battery temperature, condition and age, ambient temperature and the power provided by the charger. Charge time increases in cold weather and if battery temperature activates safeguarding technology. In optimal conditions, the latest IONIQ 5 N is capable of accepting power at up to 240 kW.

*Range dependant on model specification. The electric range shown was achieved using the WLTP test procedure. The IONIQ 5 N is a battery electric vehicle requiring mains electricity for charging. Figures shown are for comparison purposes. Only compare fuel consumption, CO2 and equivalent electric range figures with other vehicles tested to the same technical procedures. Range figures were obtained after the battery had been fully charged. These figures may not reflect real-life driving results, which will depend upon a number of factors including the starting charge of battery, accessories fitted (post-registration), variations in weather and temperature, driving style, use of climate control, battery age and condition.
