<sup>1</sup>Ultra-fast charging using a 350kw charging station IONIQ 6 can charge from 10-80% in as little as 18-36 minutes. Actual time will vary and is dependent on a number of factors including battery temperature, condition and age, ambient temperature and the power provided by the charger. Charge time increases in cold weather and if battery temperature activates safeguarding technology. Ultra-fast chargers are currently available on selected motorways/major arterial routes – see the Charge myHyundai app or [chargemyhyundai.com/web/hyundai-gb/map](https://chargemyhyundai.com/web/hyundai-gb/map) for details. Ultra-fast chargers are not available in Northern Ireland.

<sup>2</sup>Hyundai test data for comparison purposes. Actual time will vary and is dependent on several factors including battery temperature, condition and age, ambient temperature and the power provided by the charger. Charge time increases in cold weather and if battery temperature activates safeguarding technology.

<sup>3</sup>Range dependant on model specification. The electric range shown was achieved using the WLTP test procedure. The IONIQ 6 is a battery electric vehicle requiring mains electricity for charging. Figures shown are for comparison purposes. Only compare fuel consumption, CO2 and equivalent electric range figures with other vehicles tested to the same technical procedures. Range figures were obtained after the battery had been fully charged. These figures may not reflect real-life driving results, which will depend upon a number of factors including the starting charge of battery, accessories fitted (post-registration), variations in weather and temperature, driving style, use of climate control, battery age and condition.
